## Bended tracks

It's possible to install an aluminium roller shutter on a vehicle even if the frame design is curved, we will bend the tracks for you. To do that, we only require a jig tool or drawing of the bend requested taking care of the technical possibilities explained below :

### Regular bend following given radius

Minimum radius  $\geq 750$  mm

### Bending following a given angle

Maximum angle  $\leq 5^\circ$

### Mix of multiple bend on the side tracks

#### BE CAREFUL

It's important to consider that the top and bottom of the tracks have to remain straight, without bending, because of the technical limits of the machine.

**L1  $\geq 160$  mm**

**L2  $\geq 190$  mm**

**R mini  $\geq 750$  mm**

**A  $\leq 5^\circ$**

EXAMPLE OF BENDING  
with 2 bends combined
